

Our brushes and pads

When cleaning with the single disc machines and floorscrubber dryers, besides the choice of the right cleaning machine, in particular the use of a suitable tool and the appropriate cleaning agent also plays a decisive role. In tools, a distinction is made between brushes and pads.

Here the rule is always that smooth flooring requires the use of a pad whereas textured flooring or floors with deep, wide joints require brushes. Both pads and brushes are available in various designs since the abrasiveness of the tool must suit the flooring.

Pads

Pads are used for removing dirt or coatings and for polishing floors. We offer you scrubbing pads in white, red, green and black as well as special pads. The rule with the coloured pads is that the darker the pad, the more abrasive it is, the greater the abrasion. Care is recommended here since if a too-abrasive pad is used, this may cause damage and colour changes to the flooring.

The following table provides assistance with selecting the right tool for machine cleaning of floors. We offer you brushes in various hardness grades appropriate to your flooring.
